Mestex Achieves ISO 9001:2008 Certification

Dallas, TX – Mestex, an HVAC manufacturer for industrial and other commercial applications, today announced it has achieved International Organization for Standardization (ISO) 9001 : 2008 certification for quality management systems.

ISO 9001:2008 certification requires an organization to demonstrate their systems are developed with consistency, quality, and customer expectations in mind. To attain the ISO 9001:2008 certification, an organization must exhibit its commitment to enhancing customer satisfaction by applying a management system that allows for continual improvement and the ability to conform to customer, statutory and regulatory requirements.

According to Mike Kaler, president of Mestex, “Our ISO certification illustrates to customers, prospects and employees the commitment to excellence and sustainability that Mestex embodies. This ISO certification ensures that Mestex provides high quality, mission critical HVAC systems that meet the unique needs of each of the industries we serve.”

“To Mestex, this certification provides a visible and constant reminder, internally and externally, of the high quality of our office work, engineering work and ultimately Mestex’s product manufacturing,” Kaler continued. “We are very proud of this achievement.”

#

Mestex (www.Mestex.com), is a division of Mestek, Inc., a group of HVAC manufacturers with a focus on air handling and a passion for innovation. Mestex is the only HVAC manufacturer offering industry-standard direct digital controls on virtually all of its products, which include Applied Air, Alton, Aztec, Temprite and LJ Wing HVAC systems.

Mestex evaporative cooling products have been designed and manufactured in the USA for more than 60 years.
